Note 1: Refer to Fig.3-3-(a).

Note 2: The brightness of LCD panel could be changed by adjusting the AC component of V_{COM}.

Note 3: STHL, STHR, OEH, L/R, CPH1~CPH3, STVR, STVL, OEV, CKV, U/D.

Note 4: GND, V_{CC}, and V_{GL} are applied to LCD first and then V_{GH} is applied.

Note 5: Vcc setting should match the signals output voltage (refer to Note 3) of customer's system board.

- Note 1: The ambient temperature is 25°℃.
- Note 2: The ambient temperature is 0° C.
- Note 3: The lamp frequency should be selected as different as possible from display horizontal synchronous signal to avoid interference.
- Note 4: For starting the backlight unit, the output voltage of DC/AC's transformer should be larger than the maximum lamp starting voltage.
- Note 5: The "lamp life time" is defined as the module brightness decay to 50% of original brightness when the ambient temperature is 25°C and I_L =6mA.
- Note 6: Measure inverter type: DA1205, C=27pF, Input Voltage=12.0V.

Test Conditions:

- 1. V_{CC} =5V, AV_{DD} =5V, I_L =6mA (Backlight current), the ambient temperature is 25 $^{\circ}$ C.
- 2. The test systems refer to Note 2.

PAGE: 17/24

Note 1: Definition of viewing angle range

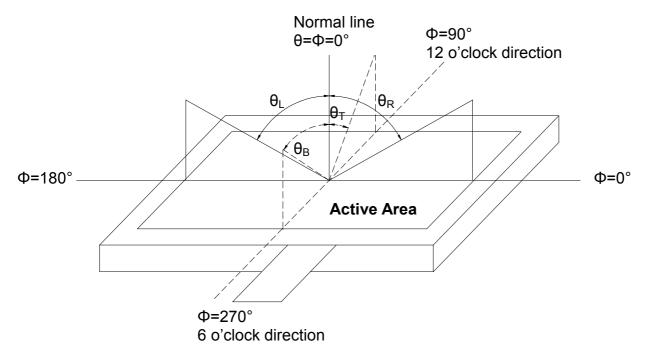

Fig. 4-1 Definition of viewing angle

Note 2: Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 30 minutes operation, the optical properties are measured at the center point of the LCD screen. (Response time is measured by Photo detector TOPCON BM-7, other items are measured by BM-5A/Field of view: 1° /Height: 500mm.)

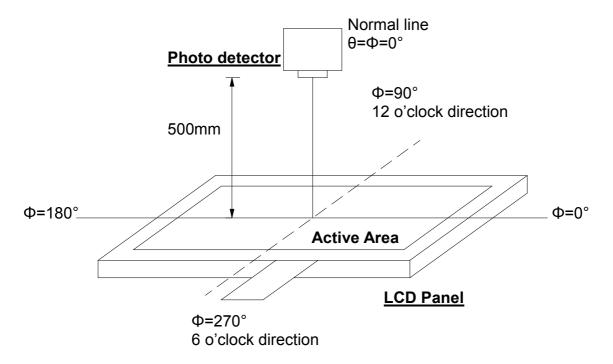

Fig. 4-2 Optical measurement system setup

The copyright belongs to InnoLux. Any unauthorized use is prohibited.

PAGE: 18/24

Note 3: Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%.

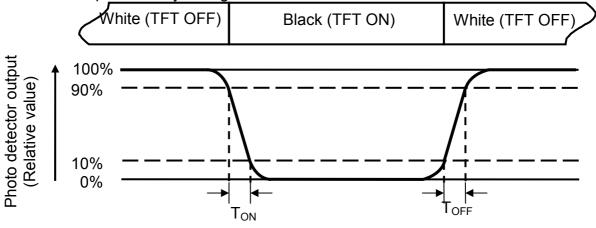

Fig. 4-3 Definition of response time

Note 4: Definition of contrast ratio

Contrast ratio (CR) =
Luminance measured when LCD is on the "White" state
Luminance measured when LCD is on the "Black" state

White $V_i = V_{i50\%} \pm 1.5 \text{ V}$ Black $V_i = V_{i50\%} \mp 2.0 \text{ V}$

"±" means that the analog input signal swings in phase with V_{COM} signal.

"\(\pi\)" means that the analog input signal swings out of phase with V_{COM} signal.

V_{i50%}: The analog input voltage when transmission is 50%

The 100% transmission is defined as the transmission of LCD panel when all the input terminals of module are electrically opened.

- Note 5: Definition of color chromaticity (CIE1931)

 Color coordinates measured at center point of LCD.
- Note 6: All input terminals LCD panel must be ground while measuring the center area of the panel.

PAGE: 19/24

Note 7: Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer to Fig. 4-4). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (Yu) = $\frac{B_{min}}{B_{max}}$

L-----Active area length W----- Active area width

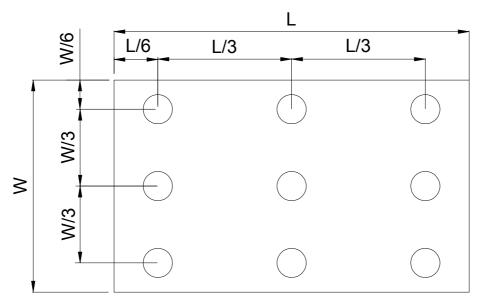

Fig. 4-4 Definition of measuring points

 \mathbf{B}_{max} : The measured maximum luminance of all measurement position. \mathbf{B}_{min} : The measured minimum luminance of all measurement position.

- Note 1: Ta is the ambient temperature of samples.
- Note 2: Ts is the temperature of panel's surface.
- Note 3: In the standard condition, there shall be no practical problem that may affect the display function.
- Note 4: Before cosmetic and function test, the product must have enough recovery time, at least 2 hours at room temperature.

6. General Precautions

6.1. Safety

Liquid crystal is poisonous. Do not put it in your mouth. If liquid crystal touches your skin or clothes, wash it off immediately by using soap and water.

6.2. Handling

- 1. The LCD panel is plate glass. Do not subject the panel to mechanical shock or to excessive force on its surface.
- 2. The polarizer attached to the display is easily damaged. Please handle it carefully to avoid scratch or other damages.
- 3. To avoid contamination on the display surface, do not touch the module surface with bare hands.
 - 4. Keep a space so that the LCD panels do not touch other components.
- 5. Put cover board such as acrylic board on the surface of LCD panel to protect panel from damages.
- 6. Transparent electrodes may be disconnected if you use the LCD panel under environmental conditions where the condensation of dew occurs.
 - 7. Do not leave module in direct sunlight to avoid malfunction of the ICs.

6.3. Static Electricity

- 1. Be sure to ground module before turning on power or operating module.
- 2. Do not apply voltage which exceeds the absolute maximum rating value.

6.4. Storage

- 2. Do not store the module in surroundings containing organic solvent or corrosive gas.
 - 3. Store the module in an anti-electrostatic container or bag.

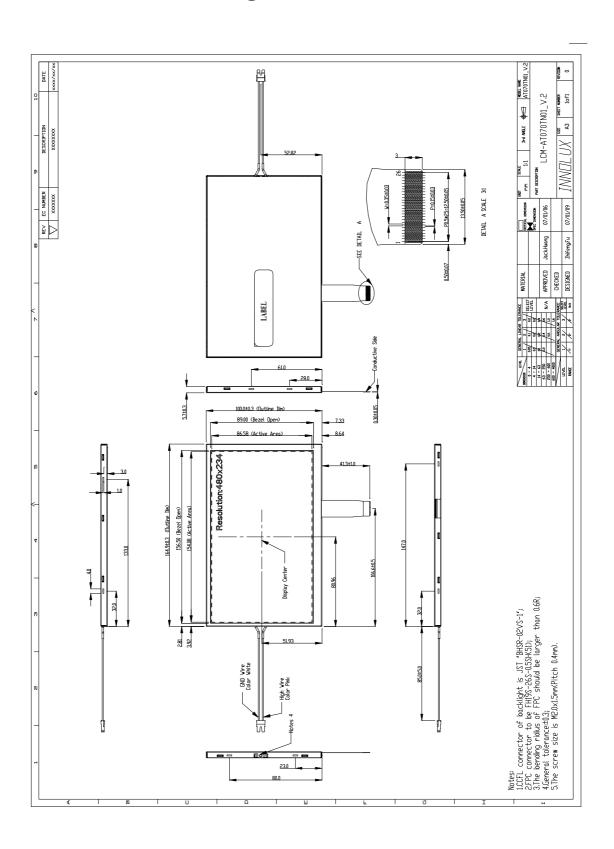

6.5. Cleaning

- 1. Do not wipe the polarizer with dry cloth. It might cause scratch.
- 2. Only use a soft sloth with IPA to wipe the polarizer, other chemicals might permanent damage to the polarizer.
